

ALZHEIMER'S CAREGIVERS GET A HIGH-TECH HELPING HAND

April 24, 2006

For Immediate Release

VICTORIA, B.C. – A piece of cutting edge technology is about to make it easier for caregivers to locate people who wander. An innovative wireless technology designed to prevent those with Alzheimer's and dementia from wandering will soon be giving caregivers a helping hand at locating them when they wander.

Currently nearly 300,000 Canadians – one in 13 people over the age of 65 – have Alzheimer's or related dementia. As the baby boomers age, this number is projected to skyrocket to three-quarters of a million by the year 2031 (Alzheimer's Society of Canada). Wandering continues to be one of the key health and safety concerns related to Alzheimer's and dementia. A new technology called Secure Care PATH is utilizing the next generation of VHF transmitter technology to aid in keeping this growing demographic safe.

Employing a small battery powered wristband and VHF radio unit, the Secure Care PATH system allows individuals who do wander to be located using the reliable VHF technology to pinpoint their location. Those using the Secure Care PATH system record an average search time of 22 minutes. The unit can be used in conjunction with existing internal secure doors and coded entry systems.

The Secure Care PATH is a wireless technology engineered and manufactured by Victoria, B.C. based company Locator Systems Corporation. Secure Care Products Inc of Concord, NH, will be an Original Equipment Manufacturer for the Locator Systems technology and will sell, market and support the product to their 150 dealers and 7000 facilities.

"Wandering is one of the key concerns for caregivers of those with Alzheimer's and related dementia" says Harold Baldwin, President of Secure Care Products, Inc. "Secure Care PATH provides caregivers with an extremely reliable, restraint-free way to locate people who wander beyond the door. The product fits in extremely well with our other products for the

facility and truly allows us to provide end-to-end care and support for facilities who are faced with increased liabilities issues."

"The advanced technology we have designed into the VHF transmitter and receiver provide for the most reliable solution for locating people who wander," says Jim McIntosh CEO of Locator Systems Corporation. "Working with a partner like Secure Care Products Inc. who has a well established sales channel of 150 dealers and 7000 facilities will get the product into facilities to provide them with an unparalleled solution for locating people who wander."

About Locator Systems Corporation

Locator Systems Corporation, a division of HABIT Research Ltd., engineers and manufacturers world class wireless technology for locating people who wander. The products are currently designed for people with Alzheimer's and Autism and sold by Secure Care Products a leading designer, manufacturer and provider of electronic monitoring equipment for the healthcare and access control industries.
