# Track

Track travel routes when they are on the go.

## REAL TIME TRACKING

SafeTracks technology allows you to view the user's travel history as well as track them every 1-2 minutes or 150 meters in real time.

Support mobility, safety and have **peace of mind using GPS tracking.**

# Protect

Help keep them safe with designated 'safe to walk' areas.

## MONITORING & ALERTS

Create a customized safe-zone to keep the user safe and receive an SMS and/or email when a safe area is left or a danger area is entered.

Be notified when predefined safe or danger zones are breached.

# Locate

GPS technology is integrated into their SmartSole.

## GPS LOCATOR FEATURE:

In addition to knowing their location, learn the speed at which they are travelling and the direction they are heading.

Use a smart phone and/or web-enabled device to help locate the SmartSole user.
